

WATER IN NATURE

WORKSHEET 6

Homework

- 1) Watch the following video <https://www.youtube.com/watch?v=bfr82RB72U8> and read the information that is contained in the following website: https://www.usgs.gov/special-topic/water-science-school/science/desalination?qt-science_center_objects=0#qt-science_center_objects

After learning about desalination of water, you are convinced that is the best solution for your country, because it will increase its water reserves.

You are one of the people in the role-play. Look at all the ID cards and study the padlet (<https://padlet.com/mepr4/tdfiopik7imelumm>). Then choose who you are (you don't have to be the same person that you were before).

Write **a letter to the Ministry of Environment** to convince him or her to invest on creating huge desalination plants to provide freshwater to your country. (Write between 140-190 words).

- 2) An international environmental organization is organizing a contest for the best **poster** that will make the European citizens aware of the fact that freshwater is not as abundant in nature as we may think and urge them to take action so that your generation will not face serious problems in the future.

You can draw your poster, or you can use whatever digital tool you want to make it. If you do not have experience in creating digital posters, a very easy to use programme is "[Piktochart](#)". Read [these](#) instructions and watch [this](#) tutorial and then you will be able to create your poster easily!

You can consult [the glossary](#) we have created if you are not sure about the meaning of a word you need to use!
